# GENERATE YOUR MUSCLE

Maintaining muscle mass and muscle strength are essential to a healthy life. Unfortunately, diseases and ageing cause excessive loss of muscle mass. Until now, no methods are available to treat muscle breakdown. However, recent discoveries have shown that muscle stem cells can induce the production of healthy muscle fibres.

Generate Your Muscle will test such a muscle stem cell therapy. Specifically, it will address the therapy's safety and effectiveness for patients with muscle disorders.

Ultimately, the project wants to scale up muscle stem cell production in a new spin-off company. This should make the therapy affordable and broadly available.

At Interreg Euregio Meuse-Rhine, we fund projects where partners work together across borders. In 2014-2020, we invest EUR 96 million from the European Regional Development Fund in our region.

We are a collaboration between 13 regions from Belgium, Germany and The Netherlands. Together, we develop shared solutions to common challenges. This gives Interreg its own, distinct spirit of cooperation: across regions and across borders.
